## PRODUCT LINE

### **MINERVA**

MINERVA is a feed material composed by a natural product rich in humic substances. Humic substances are the biological-chemical-geological decomposition products of the plant biomass. Scientific publications designate natural humic substances as "alternative antibiotics" and natural antiviral additives.

### **GLYCOGEN HP**

Glycogen HP is a solid feed supplement rich in glucogenic substances and organic cobalt. This product can completely prevent ketosis in animals, thanks to its properties Glycogen HP is the perfect supplement to maintain an optimum milk production level.

### **UREA SLOW RELEASE**

Urea is an economical source of non protein nitrogen available for bacteria living in the rumen. Thanks to new technologies urea can be released slowly in the rumen without risks of intoxication for the animals.

## PACTATOX & PACTASORB

PACTATOX is a mycotoxin binder that protects animals health by deactivating mycotoxins found in contaminated feed: its precise formula combines different active ingredients with particular specificity, giving PACTATOX a broad spectrum binding capacity.

PACTASORB effectively prevents digestive absorption of mycotoxins present in the animal feed, ensuring animal health and feed/food safety. It is a unique non-digestible mycotoxin binder based on an optimized formulation of activated clays and Mannan-Oligosaccharides with a broad-spectrum mycotoxin binding efficacy.

## MICROENCAPSULATED PRODUCTS

METHIO-SAVE is microencapsulated methionine that increases milk parameters (milk yield and milk quality) and maintain animals in good health.

LYSIN-SAVE is microencapsulated lysine that optimize and maintain high production levels.

CHOLIN-SAVE is microencapsulated choline that improves milk production (milk yield and milk quality) and health status of animals.
